GROOVING SYSTEMS

highest quality and flexibility thanks
to a vast product offering

GRINDING – INDEXABLE INSERTS AND CUTTING INSERTS

Production completed entirely on
Guhring-built grinding machines

COATING – INDEXABLE INSERTS AND CUTTING INSERTS

// In-house coating on
Guhring-built coating systems
// Latest coating technology
and coating types

MILLING/TURNING – HOLDER PRODUCTION

GUHRING'S IN-HOUSE CARBIDE PRODUCTION

Blanks – Indexable inserts and cutting inserts
Guhring-produced carbide grades

Guhring R&D for innovative tool developments

Highest quality standard world-wide

Pooled expertise under one roof

Vast product offering

Machining technology with an edge

With innovative technologies Guhring meets specific customer requirements from process proposal to production application of precision tools – flexibly, promptly, globally. To aid in this experience, field experts across the world are available to offer on-site support at customer locations. Production, service and contact persons are available from one supplier world-wide.

In-house carbide production In-house machine construction
 In-house coating plants Highest quality standards world-wide

The world map features 30 yellow location pins, each corresponding to a callout box for a Guhring production site. The callout boxes are arranged in a grid below the map, each containing a number, a photograph of the facility, and contact information.

GROOVING SYSTEMS

Explanation of the article description

Article description System 104/106

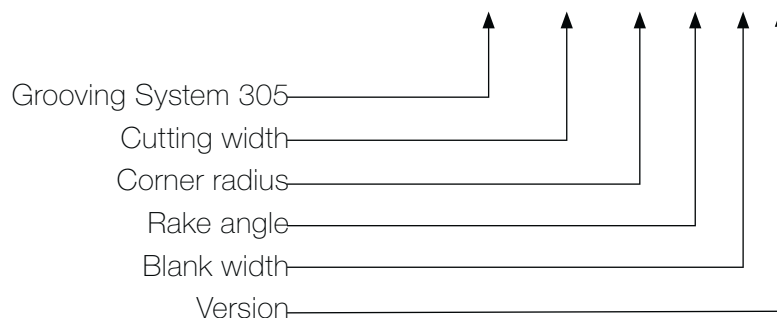

Tool description: Example: GT104.2326.010.22.30.R

Article description System 305

Tool description: Example: GE305.0250.020.BA.04.N

When ordering please always state the
Series no. and the Code No. i.e.:
 Article GG104.VM02.040.04.15.R,
 TiN-coated = **25164 4.001**

Ordering example

Micro-precision tools for internal threading

Cutting insert for internal threading, full profile - metric standard threads

• pitch P = 0.4-0.8

for tool holders type GH104/GB104 see from page 16

System 305

Spare parts

Series no.	Clamping screw	Tightening torque
25901		Nm
Code 4.000	M4x15x42x15IP	4-4.5

Series no.	Torx-Plus Wrench
25904	
Code 15.000	T15IP T-handle

Square shank holder straight, external machining, with IC

- grooving depth up to 5 mm
- with internal coolant delivery from above and below

Type GH 305

for indexable inserts type 305 see from page 137

Spare parts

Series no.	Clamping screw	Tightening torque
25901		Nm
Code 4.000	M4x15x42x15IP	4-4.5

Series no.	Torx-Plus Wrench
25904	
Code 15.000	T15IP T-handle

Square shank holder straight, external machining, IC adjustable

- grooving depth up to 5 mm
- with internal coolant delivery

Type GH 305

for indexable inserts type 305 see from page 137

Spare parts

Series no.	Clamping screw	Tightening torque
25901		Nm
Code 4.000	M4x15x42x15IP	4-4.5

Series no.	Torx-Plus Wrench
25904	
Code 15.000	T15IP T-handle

System 305

Square shank holder 90° offset, external machining, with IC

- grooving depth up to 3.5 mm
- with internal coolant delivery from above and below

Type GH 305

for indexable inserts type 305 see from page 137

System 305

Spare parts

Series no.	Clamping screw	Tightening torque
25901		Nm
Code 4.000	M4x15x42x15IP	4-4.5

Series no.	Torx-Plus Wrench
25904	
Code 15.000	T15IP T-handle

Square shank holder 45° offset, external machining, without IC

- grooving depth up to 2 mm
- without internal coolant delivery

Type GH 305

for indexable inserts type 305 see page 137

System 305

General machining hints

Width of machining should be min. 70% of the width of the cutting edge

Reduce feed by 20 – 50% when grooving on angled faces

Recessing
 - radial in-feed
 - turning in axial direction
 - leave axial and radial stock for finishing

Process tip for recessing:
 1 – pre-grooving “comb”
 2 – removing remaining webs
 max width of webs: insert width $b - (2xr)$
 3 - finishing

Process tip for parting:
 1 – pre-grooving
 2 – chamfering
 3 - parting

Process tip for parting into a central bore:
 1 – pre-grooving with tool type GV104
 2 – parting with tool type GZ305

Application hints for the cutting insert GJ104/106 with wiper geometry

The wiper geometry offers multiple options

- You retain the feed rate of the cutting insert without wiper geometry and achieve a considerably better surface finish.
- You increase the feed rate taking the entire process (material, chip formation, stability) into consideration and achieve the following improvements:
 - reduced machining time
 - therefore reduced engagement of the tool, improving tool life
 - improved chip formation/chip breakage
 - thicker chip enables better heat dissipation

Please note the following carefully!

The cutting insert/holder must be positioned axially parallel to optimize the wiper. This is the only way the wiper geometry can achieve its desired effect to improve the surface finish.

General formulas to determine the surface finish quality

$R_{th} = f^2 / 8 \cdot r$	$r = f^2 / 8 \cdot R_{th}$	$f = \sqrt{8 \cdot r \cdot R_{th}}$
----------------------------	----------------------------	-------------------------------------

Application example

Application: Boring out Ø 4 mm		Tool selection		Customer benefit
Component:	Sleeve	System:	104	Rz 5-8 µm was achieved with a cutting insert without wiper. With a wiper cutting insert Rz values could be improved to 2-4 µm. In the 2nd step vc was increased to 130 m/min. This resulted in an improved surface finish.

System 104/106

Positioning and clamping

Guhring's system 104/106 is unique in terms of insert positioning and clamping: The position between cutting edge facing up and cutting edge facing down can be changed by keeping the same length position without loosening the holder.

Definition of the cutting edge position

Internal threading System GG 104 and GG 106

Feed process

Radial feed

- Both cutting edges engaged at the same time
- High cutting pressure and thermal load
- Especially suitable for the machining of short-chipping materials
- For the production of threads with a small pitch and small thread depth as well as multiple start depths to prevent pitch errors

One-sided flank in-feed

- Only one cutting edge engaged
- Lower cutting pressure and thermal load
- Especially suitable for the machining of long-chipping materials
- Achieve a higher surface finish quality at the respective thread flank

Reciprocal flank in-feed

- Both cutting edges alternately engaged
- Lower cutting pressure and thermal load
- Especially suitable for the machining of long-chipping materials
- Achieve a higher surface finish quality at the flanks

Internal threading

System GG 104 and GG 106

Broaching System GN 104 and GN 106

General hints

Please align the tool accurately.

The alignment surface on the tool holder GB104/106 provides a significant benefit.

Application instructions

- For blind holes there must be an undercut or cross hole at the bottom of the broach profile to allow chip evacuation.
- As a general rule the delivery of coolant (soluble or neat oil) helps the broaching process. It promotes chip evacuation, increases tool life, and improves surface finish.
- On the return stroke the tool must travel completely out of the hole.
- Pay attention to the feed \varnothing when programming the first stroke (load on the cutting corners).

Calculating the feed diameter $\varnothing d1$ for the first stroke

Example: Hole \varnothing : 8 mm
Groove width: 5 mm
Safety distance between cutting corners and workpiece \varnothing : 0.15 mm

r = radius workpiece (hole \varnothing 8/2) = 4
 b = Cutting edge / 2 (5/2) = 2.5

Feed radius = $\sqrt{r^2 - b^2}$ - safety distance

Feed radius = $\sqrt{4^2 - 2.5^2}$ - 0.15 = 2.97

Feed diameter $\varnothing d1 = 2.97 \times 2 = \varnothing 5.94$

The feed diameter for the first stroke in the machining example above is $\varnothing 5.94$

Feed and feed rate

- The feed per stroke is dependent on the tensile strength of the material to be machined.
- The feed rate when broaching corresponds to the cutting speed and is controlled by the Z-axis of the machine.
- Achievable speeds are partly limited by the machine conditions.

	Tensile strength (N/mm ²)					
	300	400	600	800	1000	1200
Feed rate (mm/min)	10000	8000	7000	6000	5000	4000
Feed per stroke (mm)	0.1	0.08	0.07	0.06	0.05	0.04

* Values are for guidance only. The machine condition, rigidity of component clamping as well as the workpiece material influence the cutting parameters.

Broaching System GN 104 and GN 106

Sequence of machining

Broaching square profile:

- The broaching inserts generate a 90° corner
- The component must be repositioned 4 times each 90° to complete the square profile

Broaching hexagon profile:

- The broaching inserts generate a 60° corner
- The component must be repositioned 6 times each 60° to complete the hexagon profile

Broaching Torx profile:

- The broaching inserts generate one section of the torx profile
- The component must be repositioned 6 times each 60° to complete the torx profile

Application example

Application: Hexagon broaching		Tool selection		Customer benefit
Component:	Sleeve	System:	106 Special tool	The current process required a high amount of manual rework. Also the tool life was low. With the Guhring tool the customer achieves a very good surface with high tool life. Also there is no more manual rework required.

Application hints for holder GH305...EST with adjustable coolant supply

The adjustable valve directs the coolant to the cutting edge as follows:

Coolant supply directed to the rake face

Coolant supply directed to the clearance face

Coolant supply directed to both spots

The GH305 . . . EST is Gühring's patent pending grooving holder with internal coolant.

What makes it worth the effort?

- You can optimally provide your process with coolant even at low coolant pressure:
 - first choice is the coolant supply to the rake face
 - if chips interfere or prevent coolant delivery, the temperature can be effectively controlled by cooling the clearance face.
- With high coolant pressure we recommend cooling from both coolant holes:
 - cooling the rake face can positively influence chip fracture
 - cooling the clearance face provides additional temperature reduction of cutting edge

Application example

Application: External grooving radial		Tool selection		Customer benefit Gühring's precision ground insert offers more tool life than the just sintered product of the competitor. Additionally the customer reported better chip formation as well as improved surface quality.
Component:	Piston	System:	305	
Material:	17 CrNiM0 6	Holder:	GH305.2020.125.00.04.R.IK.EST

25601	Indexable insert for radial grooving external and internal	137
25602	Indexable insert for radial grooving external and internal	137
25603	Indexable insert for radial grooving external and internal	137
25605	Indexable insert for radial grooving and copying external and internal	138
25606	Indexable insert for radial grooving and copying external and internal	138
25607	Indexable insert for radial grooving and copying external and internal	138
25613	Indexable insert for radial grooving and copying external and internal	139

Series	Description	Page
25614	Indexable insert for radial grooving and copying external and internal	139
25615	Indexable insert for radial grooving and copying external and internal	139
25618	Indexable insert for grooving axial external recesses	142
25619	Indexable insert for grooving axial external recesses	142
25620	Indexable insert for grooving axial external recesses	142
25621	Indexable insert for grooving axial external recesses	142
25622	Indexable insert for grooving axial external recesses	142
25623	Indexable insert for grooving axial external recesses	142
25626	Indexable insert for axial grooving, straight slots	140
25627	Indexable insert for axial grooving, straight slots	140
25628	Indexable insert for axial grooving, straight slots	140
25629	Indexable insert for axial grooving, straight slots	140
25630	Indexable insert for axial grooving, straight slots	140
25631	Indexable insert for axial grooving, straight slots	140
25634	Indexable insert for axial grooving, full radius slots	141
25635	Indexable insert for axial grooving, full radius slots	141
25636	Indexable insert for axial grooving, full radius slots	141
25637	Indexable insert for axial grooving, full radius slots	141
25638	Indexable insert for axial grooving, full radius slots	141
25639	Indexable insert for axial grooving, full radius slots	141
25641	Indexable insert for parting off	145
25642	Indexable insert for parting off	145
25643	Indexable insert for parting off	145
25646	Indexable insert for parting off	146
25647	Indexable insert for parting off	146
25648	Indexable insert for parting off	146
25649	Indexable insert for parting off	146
25650	Indexable insert for parting off	146
25651	Indexable insert for parting off	146
25654	Indexable insert for thread turning, part profile	143
25655	Indexable insert for thread turning, part profile	143
25656	Indexable insert for thread turning, part profile	143
25657	Indexable insert for thread turning, part profile	143
25658	Indexable insert for thread turning, part profile	143
25659	Indexable insert for thread turning, part profile	143
25662	Indexable insert for thread turning, full profile	144
25663	Indexable insert for thread turning, full profile	144
25664	Indexable insert for thread turning, full profile	144
25665	Indexable insert for thread turning, full profile	144
25666	Indexable insert for thread turning, full profile	144
25667	Indexable insert for thread turning, full profile	144
25700	Cutting insert for boring out and profiling	91
25701	Cutting insert for boring out and profiling	93
25702	Cutting insert for boring out and profiling	91
25703	Cutting insert for boring out and profiling	93
