WORK TOOLS

INNOVATING FOR 140 YEARS

Williams has made strong, trusted tools for Industrial professionals since 1882. Due to their precise manufacturing process, Williams' products were used in the countless industrial shops of 19th century America.

From innovative products that helped make us famous, like Superrench[®], Supersocket[™], and Supertorque[™] we're carrying on the tradition of forging top-quality tools that hard-working people depend on.

Today with world-class factories across the United States, Williams' heritage of high-quality, industrial-focused tools continues to deliver a brand of tools that is ready to work.

EXPERIENCE MATTERS

At Williams, we believe selling a product is more than an exchange of tools. When you work with Williams, you work with industrial tool professionals whose experience in the field and the factory help you make smart decisions for your business.

With demanding timelines, unusually tough conditions and many other obstacles businesses face today, it is important to partner with a company that understands your challenges.

Williams and our distributors are here to help you find the right solutions for your individual business. Williams has a network of professionals with knowledge you can count on.

TRUSTED. STRONG. VALUED.

BUILT FOR INDUSTRIAL APPLICATIONS

Our growing assortment includes tools that are engineered to withstand demanding needs of industrial environments. Where the hard work is done, and steel strength is essential.

Williams' special blend of steel allows for a higher heat treat than average steel. This means each tool gets just the right hardness, toughness and strength for industrial applications.

And we know how to make great tools. Williams tools keep factories running safely and efficiently. They build and maintain ships. They keep power generation plants and oil production flowing and so much more. With 8,000+ tools in our portfolio, you will find the right tools to get the job done.

UNDERSTANDING WORK

With almost 140 years of experience, people trust Williams to design and manufacture tools that are safe, strong and reliable.

We know that keeping your people safe is the top priority. That's why we offer not just the safest products in the business, but the training and instruction on how to use them properly.

Our training programs help tool users learn about dangers involving misused, modified, and poorly maintained tools and how to determine the right tool for any and every job. In addition, we teach importance of ergonomics, tethered tools, proper calibration and more.

TORQUE SCREWDRIVERS - SINGLE SETTING

The tamper resistant design of the **Single Setting** series is particularly suited for high-volume use in assembly operations. A simple, cam-over design prevents over-tightening and possible damage to components.

Torque screwdrivers may be ordered factory pre-set at an additional charge or they may be easily set by the operator with any quality torque calibration system. The end cap removes for easy access to the 1/8" hex adjustment screw. A hex adjustment key is included with each driver.

The Single Setting series includes four models with available torque settings from 6 in. ozs. up to 40 in. lbs. When precision and repeatability are a must, the choice is simple - Williams Torque Screwdrivers.

TORQUE MULTIPLIERS WITH HANDLES

Features

- Provides the operator with nut-turning power that requires only a fraction of the force required when using conventional tools.
- Input and output rotation is in the same direction.
- Reaction bar rotation is opposite to input direction and must rest securely against a rigid object to withstand the generated reaction force.
- By removing 4 screws, heads may be easily disassembled for inspection, cleaning and lubrication.

TORQUE 101

Need help educating your department or shop staff on why applying the correct torque is critical to proper assembly or maintenance operations?

The Williams **Torque Wrench 101** "textbook" is the perfect, simple and quick-read reference to train staff on what torque is. It explains why proper torque is important, torque wrench applications, proper torque wrench selection, and much more. Ask your Williams representative for your laminated copy today.

TORQUE 101

WHY PROPER TORQUE IS SO IMPORTANT!

It's about safety, reliability, and performance. EVERY manufacturer, whether it's in aerospace, motor vehicles, precision equipment, power generation, etc., specifies critical fastener torque for important reasons; under or over tightening critical fasteners can lead to product failure. And product failure means downtime, higher costs, potential injury, and more.

WHAT IS TORQUE?
Torque is rotational or turning force.

Torque is measured in length and force: Length means distance from "center of drive" to "center of handle". Force means "pounds", "Newtons" etc.

HOW DO YOU CALCULATE TORQUE?
Torque = Length x Force

The standard torque formula used to calculate torque is: "L x F = T"

EXAMPLE: 2 ft. (length) x 30 lbs. (amount of force at center of handle) equals 60 ft. lbs. of torque (60 Ft. Lbs.)

EXAMPLE:
Apply 80 ft. lbs. of torque, then apply 90 degrees of rotation

WHAT DOES TORQUE DO?
Torque creates a "Clamp Load" to join two pieces of material.

- Bolts (or threaded fasteners), are designed to create clamping force, also called "clamp load".
- When torque is applied to a threaded fastener, it draws together the joint, (two pieces of material).
- As additional torque is applied to the fastener, the joint is pulled together creating a clamp load as the fastener begins the stretching process. It's this fastener stretch that creates and maintains clamping force, like a stretched bungee cord maintaining tension.
- The actual amount of clamp load is determined by several factors:
 - The amount of torque applied to the fastener.
 - The material and grade of the fastener.
 - The external friction on the joint - friction under the fastener head, and friction between the threads of the fastener and material it's connected to.

WHY IS APPLYING PROPER TORQUE IMPORTANT?
Creating proper Clamp Load prevents damage and equipment failures.

- Safety & Performance: Applying accurate torque is critical to assembly applications, engines and precision equipment.
- Creating a proper clamp load is the main objective when applying torque to a fastener. Engine cylinder heads, pipe coupling, wheels, all need to be "clamped" uniformly to specific torque values.
- There are three main factors that affect the correct application of torque: (1) Condition of components, (2) Accuracy of torque instrument, (3) Properly applied torque values.
- Applying torque incorrectly can lead to stripped threads, premature loosening or broken fasteners that can cause catastrophic failure. Leaking joints may cause engine or equipment failures.

YOU DON'T HAVE TO CHOOSE BETWEEN SAFETY OR PRODUCTIVITY. YOU CAN HAVE BOTH!

Safety and productivity are critical to your company's efficiency and profitability and the loss of productivity can occur for a variety of reasons. That's why we designed the Tools@Height™ system to provide effective, reliable drop prevention that keeps your workers safe...and working.

Save time and money -
Engineered attachment points don't interfere with the functionality of the tools.

Leave it to the experts -
We will work with you to determine your drop prevention needs and provide a complete system to help your workers work safely and efficiently.

Retain control -
Our modular approach allows you to configure tools and holsters to your needs.

Beat the statistics -
Approximately 70% of drops happen during the exchange of the lanyard from one tool to another. The Tools@Height System tethers each tool with its own lanyard, minimizing exchanges and reducing the likelihood of drops.

Minimize risk -
Independent tethering allows a tool to be removed and returned to its holster with one hand so the user can maintain the critical "three points of contact" when working at height.

TOOLS@HEIGHT™

EFFECTIVE, RELIABLE DROP PREVENTION

WILLIAMS® OFFERS A FULL LINE OF TOOLS FOR WORKING AT HEIGHT

Rotating Screwdriver Tabs

- Located for secure retention allowing full use of the screwdriver handle
- Stainless steel tab is corrosion resistant and rotates freely 360° so the lanyard does not wrap around the users hand
- Nylon bushing has a shoulder so the tab will not bind between the handle and shank bolster

Sliding Wrench Safety Coils

- Superior design with high performance polished stainless steel for superior flexibility and shock-absorbing qualities plus no welds to fail
- Seven different sizes are utilized in the program to support wrenches up to 1-1/2" or 55mm (coils not sold separately)
- Slides out of the way along the wrenches handle to provide full use and achieve greatest leverage

Pinned Tang on Pipe Wrenches

- Pin secures the tang so that it cannot become separated from the handle

Spring Loaded Lock Buttons for Square Drive Tools and Accessories

- Lock button engages with side lock holes in sockets, extensions, and adaptors ensuring positive retention
- Sockets, extensions, and adaptors feature a locking hole on all four sides, not just one, as found on typical competitor's sockets

SAFE BUCKETS

Product Code	Closure System	Body Material	Load Rating (lbs)
PYT1500140	Hook and Loop	Vinyl	250
PYTH1500139	Drawstring	Vinyl	250

Features

- Every Safe Bucket is manufactured with either a hook and loop or drawstring closure system which helps prevent accidental drops
- All Safe Buckets are third-party load rated
- Sewn into the bottom of every Safe Bucket is hard composite plating that protects the bucket from accidental punctures. A protective leather sleeve covers the inserts that is resilient to the elements and harsh work environments.
- The Safe Bucket was engineered to be used with tools at height, and includes multiple connection points that can be tethered to. Workers can tether their tools directly to the Safe Bucket when being used, and store their tools for transport when finished.
- Instead of rope which is susceptible to fraying, a heavy-duty hoisting/shoulder strap is built into every Safe Bucket. Each bucket is also equipped with a high-quality and lightweight aluminum twist-lock carabiner load rated for 30 kN (6,700 lbs). There is no need to worry about a knot failing, or a non-locking carabiner which may slip off a connection point.
- Safe Buckets are 15 inches tall and have a 12.5 inch Diameter

WRENCHES

Features

- SUPERCOMBO® open end has specially designed grooves that direct wrench force away from fastener corners
- SUPERTORQUE® box opening design allows application of higher torque without rounding or deforming hex fastener points. No contact is made at the corners. Instead, wrenching forces are placed on the flat surfaces behind the points
- Meets or exceeds aerospace specification AS 954 for 12 point fasteners (as defined by AS 870) to provide accurate torque/tension relationship for precision application
- May be used on all common hex (6 point) fasteners with considerable advantage over conventional box end wrenches to increase both hand tool flexibility and economy
- Box and open end openings are identical

Wrench with Safety Coil -

Secure lanyard attachments need to withstand tough site use, including low temperature, so structural integrity is critical

- Superior Design - No welds to fail
- High Performance - Made from polished stainless steel, they have superior flexibility and shock-absorbing qualities over welded attachments
- Seven sizes available to support wrenches up to 1 1/2" or 55mm
- Slides out of the way along the wrenches handle to provide full use of the handle and achieve greatest leverage

Be sure to use a lanyard that has more weight capacity than the tool you are attaching because drop forces are greater than actual tool weight.

+ High Polish Chrome Finish with SUPERTORQUE® Box End

++ High Polish Chrome Finish with SUPERCOMBO® Open End and SUPERTORQUE® Box End

Fed. Spec.: ANSI B107.6; SAE AS 954

Features

- SUPERCOMBO® open end has specially designed grooves that direct wrench force away from fastener corners
- SUPERTORQUE® box opening design allows application of higher torque without rounding or deforming hex fastener points
 - No contact is made at the corners. Instead, wrenching forces are placed on the flat surfaces behind the points
- Meets or exceeds aerospace specification AS 954 for 12 point fasteners (as defined by AS 870) to provide accurate torque/tension relationship for precision application
- May be used on all common hex (6 point) fasteners with considerable advantage over conventional box end wrenches to increase both hand tool flexibility and economy
- Box and open end openings are identical

Wrench with Safety Coil –

Secure lanyard attachments need to withstand tough site use, including low temperature, so structural integrity is critical

- Superior Design - No welds to fail
- High Performance - Made from polished stainless steel, they have superior flexibility and shock-absorbing qualities over welded attachments
- Seven sizes available to support wrenches up to 1 1/2" or 55mm
- Slides out of the way along the wrenches handle to provide full use of the handle and achieve greatest leverage

Competitor's socket Williams® socket

Williams® Tools@Height™ sockets, extensions, and adaptors feature a locking hole on all four sides, not just one. Williams® Tools@Height™ ratchets and drive tools feature a locking pin which mates with the side lock hole for positive retention. This reduces the risk of misaligning the socket that typical competitor's sockets with just one side hole create.

Release pin with THPRTA - Pin Release Tool for Williams® Square Drive Tools

Do not use quick release tools with locking collars or push button release. These tools can be disengaged inadvertently.

- No contact is made at the corners
- Instead, wrenching forces are placed on the flat surfaces behind the points
- Meets or exceeds aerospace specification AS 954 for 12 point fasteners (as defined by AS 870) to provide accurate torque/tension relationship for precision application
- May be used on all common hex (6 point) fasteners with considerable advantage over conventional box end wrenches to increase both hand tool flexibility and economy
- Box and open end openings are identical

Made in U.S.A.

Grooves in the SUPERCOMBO® open ends direct wrench force away from fastener corners.

JHW1213MSC

JHW1232MSC

SUPERTORQUE™ box opening design allows higher torque without rounding or deforming fastener corners by placing wrenching forces on the flat surfaces rather than the points.

3/8" DRIVE SOCKET FLEXTENSIONS

Williams Flexextension are used extensively in engine and heavy equipment manufacturing, assembly and repair. They increase productivity by featuring an integrated (non-removable) design of the drive extension and socket to allow for reliable, continuous work without concern for the socket disconnecting from the extension as could happen with hand-tool type ball retained sockets.

SOCKETS AND DRIVE TOOLS

1/2" DRIVE SOCKET FLEXTENSIONS

Williams Flexextension are used extensively in engine and heavy equipment manufacturing, assembly and repair. They increase productivity by featuring an integrated (non-removable) design of the drive extension and socket to allow for reliable, continuous work without concern for the socket disconnecting from the extension as could happen with hand-tool type ball retained sockets.

See page 252 for 3/8" Drive Socket Flexextensions.

HYDRAULIC NUT SPLITTERS

Hydraulic Nut Splitters

REMOVES NUTS WITHOUT THE HASSLE OF TORCHES, HAMMERS & CHISELS

FAST - To remove a 3-1/2" nut with a torch or hammer and chisel might take up to 20 minutes. But you only need 20-30 seconds with the Hydraulic Nut Splitter. Set-up is fast as well, goes from the toolbox to use in less than five minutes.

SAFE - No hammers or flame are used. Hydraulic Nut Splitter cuts smoothly, so there is no danger to the operator or the surrounding equipment.

VERSATILE - Cuts through even the hardest nuts, including ASTM A194 2H from 11/16" to 6-1/8" (17 - 156 mm) across the flats. You can use it for both inch and metric sizes and with virtually any shape nut. Round, square, 12-point, and other special nuts will require the use of an adapter. Competing nut splitters require up to 17 models to cover the same size range the Hydraulic Nut Splitter does in 9 models (and even as few as four models if the Duo and Trio packages are purchased!)

PRECISE - You can easily calibrate the cutting chisel, so only the nut is cut, with no damage to the bolt or stud threads.

DURABLE - Hydraulic Nut Splitter is made to last. Our special metallurgy, geometry, and hardening process make our chisels suitable for dozens of cuts before resharpening and many resharpenings before replacing! Because of its unique compound angle chisel design, the Hydraulic Nut Splitter even cuts stainless steel nuts!

- Cut through the largest frozen nuts in just seconds, with virtually no risk of injury or accident
- One cut frees even the most corroded nuts so it can be turned
- Two cuts, 180 degrees apart, will cleanly cut the nut away
- Cutting chisel is easily calibrated, so only the nut is cut with no damage to bolt or stud threads
- Fast set-up; goes from toolbox to ready-to-use in less than 5 minutes
- Reduces danger to operator or nearby equipment
- Nine models available for cutting fractional and metric sizes and nuts of virtually any shape; can be used on stainless steel

BI-METAL SANDFLEX HOLESAWS

RESEARCHED, DEVELOPED AND MANUFACTURED BI-METAL HOLESAWS BY BAHCO®

BAHCO® Bi-Metal Holesaws

BAHCO® was the first to create a successful bi-metal blade that combines a flexible, shatter-resistant spring steel back with a high speed steel cutting edge to provide faster, more durable cutting power. With the latest generation of bi-metal holesaws, we take the technology even further.

The cutting edge (with 4 to 6 teeth per inch) is electron beam-welded to a tough alloy back, and then the teeth are precision ground to further increase cutting efficiency. The result is a holesaw that can cut clean, accurate holes in virtually any machinable material. Vertical slots allow easy core removal.

shatterproof bi-metal body for more safety

Simple holesaw selection thanks to the printed material information

Made with 8% cobalt to ensure a longer holesaw life

Range 14-152 mm has a 6° positive tooth angle for aggressive cutting

Range 168-210 mm has a 0° tooth angle to simplify cutting

Quality guarantee

Bahco is one of the few hand-tool manufacturers that make the tools and the insulation in-house. Both the PVC dipped insulated version (most of the tools) and the handle version (pliers and screwdrivers) are manufactured entirely in Bahco factories.

Each tool is tested to 10,000 V for a period of 10 seconds to provide a high level of protection during live work.

Bahco's three-layer insulated tools have a color coded, multi layer insulation coating. This provides protection as well as creating a visual warning system. If the outer insulation layer gets damaged, the lighter color underneath will become visible and warn the user. This makes it easier to detect damage to the insulation.

Routine tests in accordance with IEC60900 specification

Dielectric test

The tools are immersed in water for 24 hours. A voltage of 10 kV is then continuously applied for 3 minutes. The test is considered successful if no electrical puncture, spark over, or flashover occurs during the test period. Leakage limits must not be exceeded.

Retaining force test

This test is applied to tools that can be assembled. A force is applied to the assembled parts in an effort to separate them. If, after a minute, the parts remain assembled, the test is passed.

Impact test

The tools are cooled to -25°C for 2 hours. Then, a special hammer is used with some force on the insulating layer. The test is considered successful if the insulating material shows no breaks and passes the dielectric test.

Permanent marking durability

The markings are rubbed for 15 seconds with a rag soaked in water, and then for 15 seconds with a rag soaked in isopropanol. The test is passed if, after this process, the markings are still legible.

Insulation adhesion test

The tools are stored at a temperature of 70°C for 168 hours. Then, a force of 490 N is applied in the direction of the line dividing the insulating material from the conductive part for 3 minutes. During this test the insulation material must stay firmly attached to the tools.

Penetration test

The insulated surfaces of the tools are pressed with a special device. A voltage of 5000 V is then applied to the tool for 3 minutes. The test is considered successful if no electrical puncture, spark-over, or flash-over occurs during the test period.

Flame test

When placed over a fire, where the height of the flames on the tools does not exceed 120 mm, if the insulation material does not melt or leak, then the test is passed.

Visual and dimensional

The tools, and in particular the insulation, are visually controlled and have to be free from external defects. The markings have to be perfectly legible and the dimensions have to be in accordance with the standard.

2 PLIERS IN 1

The ERGO™ side cutting pliers have a progressive edge. Effectively, this means you can cut soft, thin wire close to the tip, and hard wire close to the screw. At the tip, the cutting edge is sharper so that it can cut softer materials such as copper, instead of simply squeezing them like most of the heavy duty pliers would.

Safety messages in this catalog use the guidelines of the American National Standard ANSI Z535.4 for Product Safety Signs and Labels and ANSI Z535.3 Criteria for Safety Symbols. Messages associated with specific products use a triangular hazard alert symbol, signal word (CAUTION, WARNING, DANGER) and how to avoid the hazard. Each message refers to pages (754-756) which provides additional safety symbols and three-part messages advising of:

- The hazard
- **How to avoid the hazard**
- *The probable consequence of not avoiding the hazard*

PLEASE READ AND FOLLOW these messages to avoid injury to yourself and bystanders.
