

Product Overview

Edge Finders are frequently used on milling machines to accurately locate working edges, shoulders, grooves, center points and scribed lines on a work piece. They are invaluable time savers and also an intelligent precautionary measure against damaging expensive machinery. General's Edge Finders come in four distinct styles and both single- and double- end designs.

Features & Benefits :

- General's edge finders accurately locate working edges, shoulders, grooves, center points and scribed lines
- Time-saving positioning tools for jig borers, milling and other machines
- Hardened and centerless ground precision tolerance
- All sizes 3" long
